EDUCATION

BSc in Engineering Informatics
Gábor Dénes University
2025 –

Technician of Software Dev.
BMSZC Neumann János
Informatikai Technikum
2020 – 2025

SKILLS

Core: React, React Native, TypeScript (state management, hooks, context, lifecycle)

Frontend: Angular, TailwindCSS, Bootstrap, RxJS, Vite, Motion

Backend: Node.js, Bun, Next.js, Prisma, FastAPI, Python, Laravel, REST API, MySQL, PostgreSQL

AI Tools: GitHub Copilot, Gemini, Claude, Antigravity

Cloud/Deploy: AWS (learning), Docker, GitHub Pages, Netlify

Practices: CI/CD (deployment hooks on main branch), TDD (unit tests), Clean Code, Feature branches, Pull requests, Issue tickets, Agile/Scrum basics

Tools: Figma, Git, GitHub, Docker, Linux, Trello, Looker

Languages: HTML, CSS, JavaScript

Other: Axios, Pandas, SQLAlchemy

LANGUAGES

Hungarian (native)
English B2 (conversational)

KEVIN CHEN

FULLSTACK DEVELOPER

ABOUT ME

Motivated IT student and developer from Budapest with hands-on experience in backend and fullstack development. I design and build REST APIs (Swagger), work with Node.js, Bun, Next.js, Prisma, FastAPI and PostgreSQL, and apply Clean Code and TDD practices across my projects. I actively use AI tools (Copilot, Claude, Gemini) daily and understand agile workflows including sprints and iterative delivery. My portfolio at kevinchen.hu is itself a live project, linking to my GitHub where you can browse my repositories.

EXPERIENCE & PROJECTS

Fullstack Web App for Businesses *Ongoing Project*

React · FastAPI · PostgreSQL · Docker · REST API

- Building a containerized fullstack application for business clients from the ground up.
- Frontend in React, backend with FastAPI and SQLAlchemy; full Docker containerization for consistent environments.
- Designed and documented RESTful APIs using Swagger for clear, maintainable integration.

Neptun Auto-login & 2FA App *React Native Project*

React Native · 2FA · Authentication

- Built a React Native mobile app that automates university Neptun login and generates built-in 2FA codes.
- Used by myself and peers — practical, real-world mobile development experience.

Web Task Evaluator & Chrome Extension *Full-stack Final Project*

Angular · Laravel · TailwindCSS · Docker · Figma

- Followed Clean Code principles: consistent naming across files, branches and classes, no dead code, clear structure throughout.
- Full-stack project with Docker containerization.
- Frontend built with Angular and Laravel, UI designed from Figma specs using TailwindCSS and smooth animations.
- Fully responsive across all device types; used feature branches, pull requests, and issue tracking.

Project Team Intern – Wolt *Position*

- Data Visualization & Analysis: Built dashboards in Looker to track key project metrics.
- Process Automation: Developed and deployed Python scripts to automate workflows on Monday boards or in Spreadsheets.
- Technical Operations: Managed high-volume tasks via Slack and ticketing systems with full GDPR compliance.
